

JOHN DOE

BACKEND ENGINEER

San Francisco, CA • (555) 019-2834 • john.doe.backend@email.com
github.com/johndoebuilds • linkedin.com/in/johndoebackend

PROFESSIONAL SUMMARY

Highly analytical and detail-oriented Backend Engineer with over 5 years of experience designing, building, and maintaining robust, scalable server-side applications. Proficient in microservices architecture, RESTful API development, and cloud infrastructure management. Proven track record of optimizing database queries to improve system performance by up to 40% and leading cross-functional teams to deliver high-quality software solutions.

TECHNICAL SKILLS

Languages:	Python, Go, Java, SQL, Bash
Frameworks:	Django, FastAPI, Spring Boot, Gin
Databases:	PostgreSQL, MongoDB, Redis, MySQL
Cloud & DevOps:	AWS (EC2, S3, RDS, Lambda), Docker, Kubernetes, CI/CD (GitHub Actions)
Tools & Methodologies:	Git, Jira, Agile/Scrum, REST/gRPC, Unit Testing (PyTest, JUnit)

PROFESSIONAL EXPERIENCE

Senior Backend Engineer – Apex Tech Solutions

San Francisco, CA | March 2024 – Present

- Spearheaded the migration of a legacy monolithic e-commerce application into a high-performance microservices architecture using Go and Docker, reducing system downtime by 35%.
- Designed and implemented a real-time notification service utilizing Redis Pub/Sub and FastAPI, successfully handling over 10 million daily events.
- Optimized slow-running SQL queries and implemented database indexing strategies in PostgreSQL, resulting in a 45% reduction in API response latency.
- Mentored 4 junior engineers, conducting weekly code reviews and promoting best practices for clean code, test-driven development (TDD), and system security.

Backend Engineer – Quantum Core Systems

Austin, TX | July 2021 – February 2024

- Developed and maintained core RESTful APIs using Python (Django) and AWS to support a financial analytics platform with 500k+ active users.
- Implemented a secure user authentication and authorization system using OAuth2 and JWT, strengthening application data protection.
- Maintained CI/CD pipelines via GitHub Actions, automating testing and deployment workflows which reduced release cycle times by 20%.
- Collaborated closely with frontend developers and product managers to scope, design, and deliver 12+ major feature rollouts ahead of schedule.

| EDUCATION

Bachelor of Science in Computer Science

University of Tech, Austin, TX | Graduated: May 2021

| PROJECTS

Distributed Task Queue (Personal Project)

- Built a fault-tolerant, distributed task scheduling system in Go using Redis as a message broker.
- Achieved processing capabilities of up to 5,000 tasks per second with built-in retry logic and error logging.

Cloud-Native Analytics Dashboard (Open Source Contributor)

- Created a background data aggregation worker in Python using FastAPI and Docker.
- Orchestrated container deployment on AWS ECS, ensuring horizontal auto-scaling based on CPU utilization.
